Los Angeles, CA

SM52304

The UCLA AIDS Mental Health Training Program provides comprehensive HIV/AIDS training to mental health providers practicing in seven southern California counties (Los Angeles, Orange, San Bernardino, Santa Barbara, Ventura, Riverside, and San Diego). This region includes more than 60,000 people living with HIV/AIDS. In collaboration with the Pacific AIDS Education and Training Center and several community-based organizations, such as the Los Angeles Minority AIDS Project and the Bienestar Latino AIDS Project, this project provides epidemiologically based training opportunities to traditional and nontraditional mental health providers who serve, or are likely to serve, populations most affect by or at risk for HIV/AIDS (including psychiatrists, psychologists, social workers, other licensed mental health providers, school-based mental health professionals, mental health providers working in community-based organizations, clergy and other spiritual advisors, primary care physicians, nurses, students in a variety of health disciplines, consumers, and families). Emphasis will be given to recruiting trainees who reflect the diversity of the populations most in need. Curricula and training are developed and executed in both English and Spanish. A scientific review group will work closely with a cultural adaptation group to assemble and disseminate the latest, most relevant research findings to mental health professionals and other target groups. These groups are composed not only of experts in the areas of HIV/AIDS and mental health, but people living with HIV/AIDS, gay men, African Americans, Latino/as, and women.

Congressional District: CA-07

FY 99 Funding: \$150,000

Project Period: 9/30/99 - 9/29/00

The applicant will work with Asian and Latino youth in West Contra Costa County, CA to prevent youth gang activity, a growing problem among of Latino and Southeast Asian American students in West Contra Costa County. A collaboration of public and private agencies led by the West Contra Costa Unified School District will pilot the Resolving Conflicts Creatively Program (RCCP), an exemplary program that has been evaluated and replicated in over 300 schools nationwide. RCCP philosophy is that learning conflict resolution skill is an essential component in building resiliency in youth to the risk factors associate with gang violence and violence. The RCCP program has been found to be culturally sensitive across a variety of populations.

California Network/Mental Health Clients

Sacramento, CA

Consumer Networking

SM52586

Congressional District: CA-05

FY 99 Funding: \$60,000

Project Period: 9/30/98 - 9/29/01

The goal of the Peer Training Project is to promote the mental health client position in State mental health related services planning and to enhance collaboration between clients and other mental health constituency groups for the purpose of effecting system change, and to enhance the growth of local client initiatives and networks throughout the State. Integral to fulfilling this goal is the fostering of self-perpetuating client leadership. The Project has three components: (1) the formalizing of a client representative and liaison process with State mental health planning bodies and other mental health related constituency groups; (2) the provision of technical assistance to local groups of clients to implement client initiatives; and (3) the development of a cadre of peer trainers/leaders to represent clients on planning bodies, liaison with constituency groups, and provide technical assistance to clients throughout the State.

In San Diego County, building on system of care principles, the Heartbeat project is carrying out a community-led process to transform the social safety net supporting children and youth with serious emotional disturbance (SED) and their families. This initiative will work to create a managed care system that transcends traditional mental health boundaries and integrates social services, education, and juvenile justice resources with mental health services for children and youth with SED. Among the significant features of the San Diego comprehensive system of care (Heartbeat) are the following: the governing consortium for the system will include equal representation from families and youth, public sector agencies, and private sector organizations; a focus on strategic alliances of private providers, allowing them to compete effectively in this new managed care environment; the provision of family outreach, education, training, and advocacy for family participation in the system of care at all levels; and monitoring of outcomes on both client and system levels.

Children and Family Network

SM52542

Congressional District: CA-01

FY 99 Funding: \$60,000

Project Period: 9/30/98 - 8/31/01

The purpose of this project is to improve and expand an existing statewide family support network for the families of children and youth with serious emotional disturbances and/or behavioral disabilities (SED). This program is designed to increase the participation of the families of children and youth with SED in statewide and local mental health and health care efforts designed to improve the system of care for the target population. The goal is to expand an existing statewide network of parents and family organizations with the ability to support parent participation and collaboration in local and statewide efforts to develop a comprehensive system of care responsive to the needs of children and youth with SED. The target population includes both individual parents and family organizations in developing parent collaborations; it is intended to cover the State of California, with a diverse population approaching 34 million. The needs of parents and families living in urban, suburban, and rural communities will be addressed.

Project Period: 9/30/99 - 9/29/01

San Diego, CA
SP08793

This project will implement a family skill building model to enhance interventions available to support high risk youth. Based on the San Diego Choice Program's experience and supporting community needs assessment data, a service gap clearly exists in San Diego County as far as the availability of family training that addresses parenting difficult adolescents. The San Diego Choice Program has developed a strategy to identify best practice models which will be phased into community-based organizations. This strategy would involve selecting and implementing a content-based interventions that would provide parents with information and tools to help them become more effective parents. By implementing a proven exemplary model, the program hopes to empower responsible families.

San Francisco, CA

Community-Initiated Grants

SP08610

Congressional District: CA-08

FY 99 Funding: \$368,341

Project Period: 9/30/99 - 9/29/02

This project will work to refine, adapt and test an alcohol abuse prevention intervention for at-risk older adults in community settings to determine its effectiveness and potential use in other situations. Adults age 60 and older will be recruited, screened and randomly assigned to intervention and control groups. It is anticipated that there will be 125 older adults in each group. Standards for at-risk drinking developed by the National Institute on Alcohol Abuse and Alcoholism (NIAAA) will be used. The intervention group will receive a brief counseling intervention conducted by health and social providers; both groups will receive a booklet with advice about healthy living. Both providers and office systems staff will be trained for their respective roles in the study. In addition, a cadre of trainers from an existing pool of alcohol and aging faculty will be trained to assist with training in a train-the-trainers approach.

Starting Early/Starting Smart

SP08000

Congressional District: CA-08

FY 99 Funding: \$680,030

Project Period: 9/30/97 - 9/29/01

This grant initiative is a cross-collaboration among CSAT/CMHS/CSAP. This Starting Early/Starting Smart project evaluates the impact of integrating behavioral health services into preschool services for children, ages three to five, for 520 at-risk children from a central register of those awaiting subsidized preschool placements in Chinatown and the Tenderloin. At-risk children will receive enhanced child development activities as part of their regular child care classes. Services will be coordinated by a multi-disciplinary Family Services Team, including mental health, health, and substance abuse specialists, an early childhood development teacher, and a family advocate responsible for case management. Additional intervention strategies include parent training, children's skills training, and family relationship enhancement activities.

TI11478

FY 99 Funding: \$500,000
Project Period: 9/30/98 - 9/29/01

The California Treatment Outcome Project (CalTOP) will pilot a standardized, automated system to track client movement through county alcohol and other drug (AOD) treatment systems and determine service outcomes in terms of AOD abuse and other social service needs. During the project development phase, several activities will be undertaken to prepare for implementation of the outcomes monitoring system (OMS). These include selection of participating counties and development of electronic linkages between the service providers, counties, and the State, a unique client identifier, standard assessment tools (to be enhanced through participation in the inter-State consensus process), and improved client satisfaction measurement tool, standard service element definitions, and data-sharing arrangements with other State agencies which are impacted by the societal cost of AOD abuse. Overall client functioning will be measured using all data collected via client interviews and cross-system data linkage. Analyses will determine the extent to which specific services result in improved AOD related outcomes, and the extent to which these services result in related cost savings. California will participate with the other State awardees in the TOPPS II inter-State "consensus" decision-making process which will determine common data measurements for treatment outcomes to be evaluated on an inter-State basis.

The proposed study will evaluate the effectiveness of the Phoenix Academy residential therapeutic community model for that population of youth with the most severe social and drug-related problems. This model will be compared to standard alternative residential treatment options. In addition the project hopes to gain knowledge into what are characteristics of adolescents for whom therapeutic community treatment is the most helpful and whether specific program services increase the likelihood of successful rehabilitation. The study will include male and female adolescents aged 15-17 who are mandated by the Los Angeles County Courts to received substance abuse treatment.
